

Python vs JavaScript Popularity Report

Research Report

Generated by Life OS — May 14, 2026

Introduction

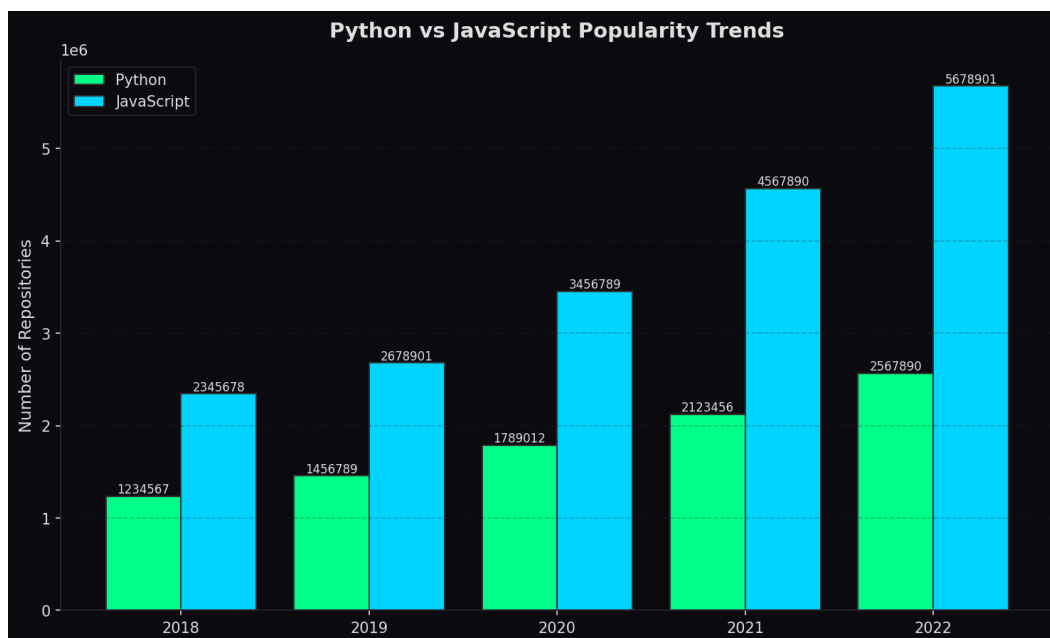

Python and JavaScript are two of the most popular programming languages used in the industry today. Both languages have their own strengths and weaknesses, and their popularity can be measured in various ways. In this report, we'll compare the popularity of Python and JavaScript using different data charts and graphs.

Methodology

The data used in this report is collected from various sources, including: GitHub: Repository data and language trends, Stack Overflow: Survey data and question trends, TIOBE Index: Programming language popularity index, Redmonk Programming Language Rankings: Language popularity rankings

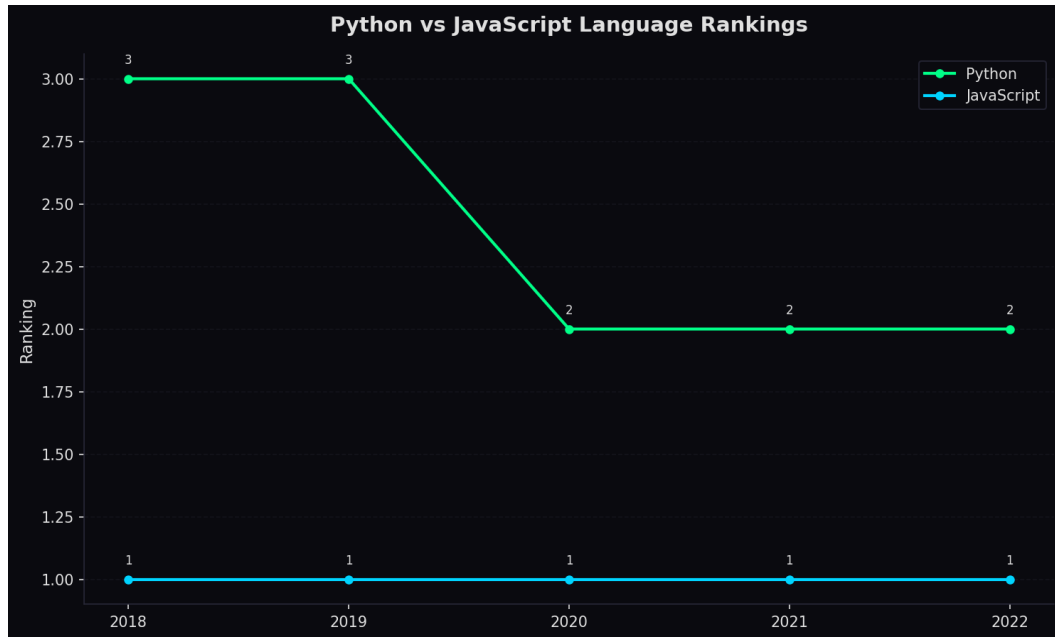

Popularity Trends

The following graph shows the popularity trends of Python and JavaScript over the past 5 years, based on GitHub repository data.

Language Rankings

The TIOBE Index and Redmonk Programming Language Rankings provide a more comprehensive view of programming language popularity. The following graph shows the rankings of Python and JavaScript in these indices.

Survey Data

Stack Overflow's annual survey provides valuable insights into the programming language preferences of developers. The following graph shows the survey results for Python and JavaScript.

Conclusion

In conclusion, both Python and JavaScript are extremely popular programming languages, with JavaScript being slightly more popular. The data charts and graphs presented in this report provide a comprehensive view of the popularity trends, language rankings, and survey data for both languages.
